PRE- & POST-TREATMENT

PRE-TREATMENT PREPARATIONS

- Patient to avoid skin irritation or intentional skin tanning. Sun-screen is advisable when outdoors during daylight hours.
- Patient should discontinue any irritant topical agents for 2-3 days prior to treatment.
- Patient should arrive for treatment with clean skin. There should be no lotion, makeup, perfume, powder or bath/shower oil present on the skin in the area to be treated.
- Patient starts preparation for treatment: photos, informed consent, topical numbing of area to be treated.

POST-TREATMENT CARE

- Immediately after treatment, most patients will experience erythema (redness) for 1-3 days, however for more aggressive treatments this may last longer. Slight to moderate edema (swelling) and a mild to moderate sunburn sensation are also common post treatment and may last 1-3 days. Skin may crust and peel for 2-7 days depending on treatment settings.
- After treatment a topical ointment may be applied to the face, no bandages or wraps are necessary.
- There are no restrictions on bathing except to treat the skin gently, avoid scrubbing or trauma to the treated area.
- Avoid sun exposure to reduce the chance of hyperpigmentation.
- The use of a zinc oxide chemical free sun block at all times after 24-48 hours.
- Multiple treatments over a period of several month may be required to achieve the desired response.
